Welch Allyn
MicroTym® 4 Portable Tympanometer

Verify otoscopy findings and empower your diagnosis of middle ear conditions with objective evidence.

The Welch Allyn MicroTympanometer 4 helps you verify middle ear conditions and improve diagnostic accuracy by providing objective analysis of tympanic membrane mobility and condition of the middle ear.

- Tests each ear in as little as three seconds; ideal for pediatrics
- Four-button navigation supports a quick, complete exam in L, R or both ears
- Provides objective middle ear analysis for all patients over six months of age

Features two testing options:

Tympanometry

- Tympanometry
- 226 Hz probe tone
- Tympanic peak pressure
- Admittance at peak
- Ear canal volume
- Gradient

Acoustic Reflex Measurements

- Ipsilateral reflexes
- Four frequencies
- Configurable reflex settings
- Automatic detection

Tympanometry testing helps support antibiotic stewardship

Watchful waiting involves observing children with uncomplicated Acute Otitis Media (AOM) for 48 to 72 hours to allow for spontaneous recovery without antibiotics. The appropriate use of watchful waiting for children with AOM could reduce costs and improve health outcomes.

Use the MicroTympanometer 4 when addressing complaints of hearing loss

Included TympView software provides a point for patient and parent education and helps support referrals. Results can be viewed on a PC and a PDF copy of the test results can be saved and printed.

In addition to otitis media, the MicroTympanometer 4 helps detect these other pathologies:

- Perforated tympanic membrane
